👤 Profile

- QA Engineer with over 10 years of experience in manual and automated testing across web and mobile platforms.
- Strong advocate of shift-left testing, with proven expertise in requirement analysis, test case design, and early quality integration.
- Experienced in designing and building scalable automation frameworks and developing robust automated test suites using modern tools.
- Skilled in integrating automation into CI/CD pipelines to improve test coverage, accelerate feedback, and enhance system stability.
- A seasoned Linux user with strong scripting and debugging capabilities.
- Thrives in Agile environments, collaborating cross-functionally to ensure quality is embedded throughout the software development lifecycle.

🧠 Skills

- Appium, Playwright, Page Object Model, Postman, Swagger, GitHub, Jenkins
- Python, JavaScript, TypeScript, Java, Bash
- Jira, Confluence, Agile/Scrum
- Teamwork and positive attitude

👜 Professional Experience

2023-04 – 2025-06

Humanforce

Senior Quality Control Engineer

- Adopted shift-left QA practice, benefiting from multiple advantages of moving testing earlier in the software development lifecycle.
- Worked closely with product managers and developers to clarify feature requirements and define clear, testable acceptance criteria
- Designed and documented comprehensive test cases in Gherkin for a clear, sharable, and executable format across technical and non-technical teams.
- Designed, built, and maintained a mobile automation using Appium and Pytest, enabling scalable, cross-platform (iOS and Android) testing.

- Improved existing API automation tests to enable parallel execution, reducing execution time, speeding up CI/CD pipeline.
- Organized workshops for devs to get them up to speed on automation test development.
- Got recognized by the QA manager for effort in building a robust automation framework

2019-11 – 2022-12

Incognito Blockchain

Senior Quality Control Engineer

- Analysed core features and designed comprehensive test cases to guarantee the functionality of the blockchain protocols in sending/trading tokens, and the communication between nodes in the network.
- Built an automation framework to validate both security and business logic for a privacy-focused blockchain platform.
- Actively engaged with the community by providing support, answering questions, and contributing to user adoption and technical discussions.
- Developed a Bash script to install/update a mining node in the blockchain network, as well as an auto-update service for it, to help non-technical community members in overcoming technical troubles in joining the network and maintaining their nodes

2018-10 – 2019-11

Premielink

Senior Quality Control Engineer

- Analysed the requirements, designed test cases and test plans to guarantee the quality of a video surveillance system, which includes a mobile app / a hardware monitor, backend service, and camera units.
- Developed and maintained automated test suites to support expanding feature sets while ensuring high system reliability and quality

2012-05 – 2018-03

Terralogic Inc.

Quality Control Engineer

- Worked across multiple projects involving desktop application testing and network testing, utilizing both manual and automation approaches.
- Got promoted to Team Leader for outstanding performance on multiple testing projects.
- Utilized automation testing and CI/CD tools to not only enhance testing efficiency but also improve the daily working process.
- Managed project documentation and workflows through Jira and Confluence.
- Employed Spirent and IXIA tools for comprehensive network testing solutions.

Education

2007 – 2012
HCMC, Vietnam

VNUHCM - University of Science
